

Resveravine[®]

Natural resveratrol from vine

- Resveratrol in its monomer & oligomer forms
- Guaranteed content of 20% oligostilbens

Resveratrol, a high potential molecule

Numerous studies highlight resveratrol's exceptional nutritional properties and define it as being one of the most potent plant molecules. Additional research work identified *Vitis vinifera* as the richest source of natural resveratrol.

- **Nexira developed and produces Resveravine®: the richest source of natural t-resveratrol from grape vine, made in France.**

Nexira's specific production process allows a natural ingredient 100 to 300 times more concentrated in t-resveratrol than other products from grape, with a guaranteed content in:

- **oligostilbens = 20%**
- **including t-resveratrol = 6%**

Global antioxidant protection

In vitro studies showed that Resveravine® offers a reinforced antioxidant protection compared to pure resveratrol or *Polygonum cuspidatum*. Resveravine® induces:

- **the most significant delay in the LDL oxidation (20% more than pure resveratrol)**
- **the most powerful effect against oxidative stress.**

Resveravine® takes advantage of synergistic effects between its compounds (monomer and oligomer of resveratrol) for naturally strengthened health properties.

Healthy aging properties

Scientific work highlighted that sirtuins (SIRT-1) in humans could have a positive effect on life span extension and that resveratrol stimulates the SIRT-1 activity.

Based on its t-resveratrol content, Resveravine® is more efficient than pure resveratrol on SIRT-1 activation, and could therefore be used for healthy aging formula.

In vitro study - Influence of several substances on the inhibition of LDL oxidation by copper

In vitro study - Influence of several substances on the oxidative stress of lymphocytes infected by the Epstein Barr virus (EBV) (3 weeks test).

In vitro study - Activation of SIRT-1, comparison between Resveravine® and t-resveratrol alone.

MAJOR BENEFITS

- **The richest source of resveratrol from *Vitis vinifera* made in France**
- **Suitable for a broad range of health application: cardiovascular prevention, anti-aging effect, antioxidant protection,...**
- **Recommended dosage: 5-25 mg/day**
